

**Innovative Medical Products® Introduces Universal SteriBump®:
A Sterile-Ready Foam Platform To Support Patient Limbs During Surgery**

*Single patient use, foam support is guaranteed sterile
while saving valuable time in the operating room*

PLAINVILLE, Conn., June 1, 2009– [Innovative Medical Products®](#), an industry leader in patient positioning devices for orthopedic surgical procedures, has introduced the pre-sterile [Universal SteriBump®](#) foam platform for stationary support of patient limbs during surgery. The foam [Universal SteriBump®](#) is latex and cloth fiber free and comes packaged in a sterile wrap, guaranteeing sterility.

The multi-use foam support is ideal for shoulder abduction during lateral shoulder arthroscopy, incision closure of total hip or knee surgery, vascular surgery, extremity trauma and carpal tunnel procedures. The [Universal SteriBump®](#) contour design cradles and elevates the patient's extremities in the sterile field. Its rectangular shape provides multiple heights.

The [Universal SteriBump®](#) guaranteed sterility frees up operating room sterile assistants from having to hold a limb during certain surgical procedures or having to bundle together towels and other cloths to create a makeshift limb support, saving valuable OR time. In addition, the [Universal SteriBump®](#) eliminates the need for hospital laundry and sterile processing personnel to wash and re-sterilize the cloths for re-use, thus preventing any potential of cross contamination or cloth fiber tissue response potentially associated with stacks of cloth fiber materials.

The [Universal SteriBump®](#) comes packaged with five foam supports, each with four patient chart stickers for product traceability – another advantage over towel bundles that are assembled with an assortment of cloth and fiber materials from various sources.

About Innovative Medical Products

Established in 1983, [Innovative Medical Products®](#) is focused on developing innovative products to benefit and improve efficiency in the operating room and hospital clinics where patient stability and positioning are required. Its products are designed to provide accuracy for the surgeon, save time for operating room personnel, and benefit the overall patient surgical experience.
