

Innovative Medical Products® Supplies LapWrap™ Positioning Pad for Laparoscopic and Head/Neck Orthopedic Surgery

Easy-to-use positioning pad not only secures patients' arms during surgery but also organizes IV tubes and leads or anesthesia

PLAINVILLE, Conn., March 3, 2009 -[Innovative Medical Products®](#), an industry leader in patient positioning devices for orthopedic surgical procedures, has announced the [LapWrap™](#) Positioning Pad, especially designed to secure patients' arms during laparoscopic and head/neck orthopedic surgery. The easy- to-use, soft-foam pad not only positions patients' arms by their sides during surgery but also organizes IV tubes and leads for anesthesia. In fact, the [LapWrap™](#) Positioning Pad was initially designed by an anesthesiologist for the anesthesia provider.

As one spine surgeon, who recently tried the [LapWrap™](#) pad, remarked, "The [LapWrap™](#) works great for my cervical spine cases. It used to be a hassle tucking arms and this product makes it simple. I am not concerned about nerve palsy problems with the soft foam padding protecting the arms. I've asked to have it used on all of my cervical spine cases."

The latex-free positioning pad is manufactured for single use and is universally sized to accommodate any patient. In addition, the innovative device protects the neurological structures of the elbow and acts as a warming blanket for the patient. Used with hook and loop fasteners, the [LapWrap™](#) is simply configured for quick, easy securing of a patient's arms and can be trimmed with scissors for better viewing of wire leads, tubing or connections.

About Innovative Medical Products® Established in 1983, [Innovative Medical Products®](#) is focused on developing innovative products to benefit and improve efficiency in the operating room and hospital clinics where patient stability and positioning are required. Its products are designed to provide accuracy for the surgeon, save time for operating room personnel, and benefit the overall patient surgical experience.
